Chapter 4 Express.js Response Object

The Response object (res) specifies the HTTP response which is sent by an Express app when it gets an HTTP request.

It sends response back to the client browser.

It facilitates you to put new cookies value and that will write to the client browser (under cross domain rule).

Once you res.send() or res.redirect() or res.render(), you cannot do it again, otherwise, there will be uncaught error.

Response Object Properties

Let's see some properties of response object.

2. res.headersSent:- It is a Boolean property that indicates if the app sent HTTP headers for the response.
3. res.locals:- It specifies an object that contains response local variables scoped to the request
