## Chapter 7 Node Js Delete Records

Node.js MySQL Select Records  
Example

Retrieve all data from the table "employees".

Create a js file named select.js having the following data in DBexample folder.

```
var mysql = require('mysql');
var con = mysql.createConnection({
  host: "localhost",
  user: "root",
  password: "12345",
  database: "webisoftech"
});
con.connect(function(err) {
  if (err) throw err;
  con.query("SELECT * FROM employees", function (err, result) {
    if (err) throw err;
    console.log(result);
  });
});
```

Now open command terminal and run the following command:
