

## Chapter 2 Node Js Create Database

**CREATE DATABASE** statement is used to create a database in MySQL.

```
var mysql = require('mysql');  
var con = mysql.createConnection({  
  host: "localhost",  
  user: "root",  
  password: "12345"  
});  
con.connect(function(err) {  
  if (err) throw err;  
  console.log("Connected!");  
  con.query("CREATE DATABASE webisoftech", function (err, result) {  
    if (err) throw err;  
    console.log("Database created");  
  });  
});
```

Now open command terminal and run the following command:

### Verification

To verify if the database is created or not, use the SHOW DATABASES command. Before this, go to initial path by using mysql-p command.
