JavaScript Placements

There is a flexibility given to include JavaScript code anywhere in an HTML document. However the most preferred ways to include JavaScript in an HTML file are as follows –

Script in `<head>...</head>` section.

Script in `<body>...</body>` section.

Script in `<body>...</body>` and `<head>...</head>` sections.

Script in an external file and then include in `<head>...</head>` section.

In the following section, we will see how we can place JavaScript in an HTML file in different ways.

JavaScript in `<head>...</head>` section

```
<html>
<head>
  <script type = "text/javascript">
    <!--
      function sayHello() {
        alert("Hello World")
      }
    //-->
  </script>
</head>

<body>
  <input type = "button" onclick = "sayHello()" value = "Say Hello" />
</body>
</html>
```

JavaScript in External File

```
<html>
<head>
  <script type = "text/javascript" src = "filename.js" ></script>
</head>

<body>
  .....
</body>
</html>
```
